

Press Release – March 15th, 2016

EOLIS air manager, 1st intelligent air filtration system to be launched in India

NatéoSanté, a French company specialising in air quality treatment, is about to launch EOLIS, the first intelligent air filtration system especially conceived for the Indian market. Manufactured in France, EOLIS is intended to be made in India later this year, at EOLANE industrial plant in Bangalore. EOLIS will be on sale in India from May 2016 and distributed through our Indian Partners.

EOLIS air manager has been conceived from the initial idea to provide an air filtration

system combining high performances and simplicity of use. Tailored for professionals in home appliances, hospitality and health/medical sectors, EOLIS will incorporate a filter system composed of a medical grade filter HEPA H13 or ULPA U15 and a high density active carbon filter able to treat an area of either 60 or 120 m² (two versions will be proposed). Natéosanté air filtration systems are equipped with the most efficient filters on the market. In order to ensure 99.9% purification, our units are silent, reliable, easy to use, adapted to your needs and energy efficient. Natéosanté is very successful in Asia, with several trusted references (Renault, PSA, MutuaIité Française, Miele ...).

The Indian market is extremely promising as declared by Mr. Stéphane Monnier, International Business Development Manager: *“India is a strategic market for our company and we want to provide Indian professionals with the best equipment to treat air pollution. Some of the cities in India like New Delhi are facing huge challenges due to very heavy levels of concentration of fine and ultrafine particles in the air, and NateoSante wants to work with Indian professionals with products like EOLIS that have a proven track record for improving quality of air and quality of life.”*

EOLIS is more an AIR MANAGER than an Air Purifier.

Thanks to the ACTIV mode, EOLIS is a smart unit automatically adapted to your environment. It includes a monitoring system easy to use thanks to a three user control interface: touch screen panel, computer or smartphone. Because each product is unique and gets a specific ID number, we can see how it works and when you need maintenance and filters to be replaced.

EOLIS air manager will be available in India from May 2016 and distributed through our Indian Partners. Available in two versions depending on the area surface to be treated (60 or 120m²), it is the first intelligent air filtration system to be marked with CE certifications.

About NATEOSANTE:

NatéoSanté is a French company created 7 years ago and specialising in quality of indoor air. The company has already provided thousands of families and professionals in France and in Asia. Our product line has been built and improved day after day, through concrete feedback from our customers, enabling us to become a reference on the market. Our experts know the problems which may be faced by our customers, we work every day to offer them solutions by taking full account of the specificities of each environment.
